

- As a logged-in user, I want to enter two happiness-related keywords to get an upbeat and uplifting playlist.
 - This user story focuses on the expected experience of a client logging in. The priority is for the user to access their personalized product connected to their specific log in information. Authentication is an important aspect of the project, as it provides the user with the personal experience they are looking for.

Logging in allows the user to access their personal art galleries and corresponding Spotify playlists. Furthermore, they can create multiple gallery/playlist combinations with different keywords to have a wide variety of moods. Logging in also allows the system to access the user's data which provides them with a unique experience. The system can access the user's saved galleries, keywords, Spotify playlists, etc.

To summarize, the story emphasizes how authentication is important for the user experience, as it allows both the user and the system to have a seamless experience with the website.
